INDEX OF SUBJECTS

A

	Page
Acid-sodium sulphate, for leaching manganese ores, to obtain manganese sulphate, patent	188
Alabandite, mineragraphic properties	33
properties	28,31
Alloys, ferrous, phase diagrams	255
use in steel industry, discussion	253
Alpha manganese, crystallography	5
electrode potential	6
Ammonia processes, for leaching manganese ores, description	173,177
flow sheets	174,178
reactions, flow-sheet	178
Anisotropic minerals, identification	32
Arkansas, Batesville district, Cason mine, shale from, analyses	45
Cason shale, concentration tests	45
manganese deposits	44
Fernvale limestone, deposits from	41
replacement deposits, as source of manganese	45
manganese-bearing clays, concentration tests	43
mining methods	42
screen analysis	43
ore, hydrometallurgical treatment, possibility	168,169
ore deposits, location	41
types	41
Arizona, Kingman district, ore, concentration tests	40
dissolution of manganese from, table	173
hydrometallurgical treatment, possibility	168,169
ore deposits, location	39
ore deposits, mineralogy	40
Atomic electrical conductance, metallic manganese	6
Austenitic manganese steels, composition	296
diagram	294
hardness	301
heat treatment	302
magnetic properties	299
diagram	300
table	300
manufacture	297
properties	298
uses	303

Generated on 2024-09-17 15:17 GMT / https://hdl.handle.net/2027/osu.32435030644108

Bases, addition to charges, function 213
Batesville district. See Arkansas.
Blue Ridge region. See Virginia.
Bementite, properties 28,31
Bessemer furnace, acid, manganese in 269
diagram 270
basic, manganese in 270
diagram 272
Beta manganese, crystallography 5
Blast furnace, crucible, inactive zone 202
experimental, description 239
diagram 240
ferromanganese manufactured, analyses 249
summary 249
fluxes 237
composition 237
for investigating smelting problems, use 235
fuel requirements 244
high-manganese slags, as source of manganese 237
lining, position of holes, diagram 248
manganese recovered 243
metal produced, analyses 240
phosphorus content 242
silicon content 242
operating results 239
table 241
operating temperatures 244
table 241
operation, on manganese ores 248
raw materials 236
slag, basicity 243
high alumina, basicity, effect on recovery of manganese 247
magnesia, effect on recovery of manganese 247
table 247
high manganese, fluxed with alumina, analyses 246
operation 245
temperatures, diagram 248
tables 250
Blast temperature, in ferromanganese furnace, discussion 214
Bradley process, for ammonia leaching of manganese ores, description 173
flow sheet 174
reactions, flow sheet 178
Braunite, mineragraphic properties 33
photomicrograph 32
properties 28,31
rate of dissolution, in sulphurous acid, curve 170
effect of temperature and size 172
table 171
